

Hypopharynx Cancers

Initial Work Up

- CT of chest
- CT (with contrast) or MRI (with contrast) of affected area and Neck
- PET for stage III or IV disease

Post chemo- and/or radiation therapy, evaluation before surgery

- PET, or MRI or CT if PET is not feasible

Follow Up

- Post treatment baseline repeat of CT or MRI of affected area and neck
- Chest CT only if indicated by clinical condition or CXR
- Further follow up imaging if clinically indicated, no routine recommendation
