

Laryngeal Cancer

Initial Work Up

- Contrast CT through larynx
- MRI of primary and neck
- CT of chest
- PET/CT if Stage III or IV

Post chemo- and/or radiation therapy, evaluation before surgery

- PET, or MRI or CT if PET is not feasible

Follow Up

- Post treatment baseline repeat of CT or MRI of affected area and neck
- Chest CT only if indicated by clinical condition or CXR
- Further follow up imaging if clinically indicated, no routine recommendation
